

German Consulting Specialist n.runs AG expands their portfolio with an “On Demand” Penetration Testing Platform in cooperation with Indian Supplier iViZ Security

n.runs AG enters into Strategic Partnership with iViZ Security to offer “On Demand” Penetration Testing Services for Applications and Networks

Oberursel, January 04, 2010 –n.runs AG, a leading German consulting company for IT Security, Infrastructure and Business Consulting, has announced their cooperation with the Indian IT-Security Company iViZ Security, to provide automatized “on demand” penetration testing for applications, network and compliance, which is offered as a “Software as a Service” (SaaS) solution for rounding off the security portfolio of n.runs..

The security of web applications is increasingly becoming a complex process that is not only cost intensive but also difficult to manage. Enterprises are facing huge pressure to secure their publicly facing websites following their QA requirements. This is doubled by regulatory and compliance mandates like PCI DSS, ISO 27001, SOX etc. The dynamic nature of today’s web application as well as the ever evolving threat landscape is making web application testing and security a huge challenge.

The “On Demand” Penetration Testing technology fulfils the demand for a security solution which is simple, efficient, effective and scalable, based on SaaS model. It provides the possibility to test infrastructure, applications and compliance on an ongoing basis. Findings can be verified and fixed manually, when indicated, by the experts of the n.runs consulting team. Penetration Testing that goes beyond simple Vulnerability Assessment helps organizations to uncover vulnerabilities which are otherwise missed.

With this automated technology as part of its security portfolio, n.runs can now deliver penetration testing services much more profitably: minimizing delivery time,

effort and increasing service scalability. "We went for the partnership with iViZ because we are convinced that with the "On Demand" Penetration Testing Technology n.runs can now combine high professional threat analysis and manually performed technical analysis with the sustainability of repeating automated tests. This will lead to accurate findings, reduced costs for our customers and increased profitability of our Security Testing Portfolio" said Donald Lee, CEO of n.runs AG. iViZ's CEO Bikash Barai added: "The combination of the iViZ based technology to simulate human hackers and n.runs' strong expertise in security consulting services would provide a powerful and comprehensive value added solution to the customers".

About n.runs AG:

n.runs AG, founded in 2001, is a multivendor provider of independent consulting in the area of IT security, IT infrastructure and IT business consulting. The services offered pursue an integral approach thus comprising audit/assessment, design, support for the application of latest technology, process consulting and finally, a transfer of knowledge to the customer. With the selection of n.runs for the Microsoft SDL Pro Network in September 2008 the sector "Secure Software Development" was successfully implemented. With 40 employees, the company generated a revenue of € 6.70 million in 2008. n.runs AG is listed on the Entry Standard of the DeutscheBörse AG (German Stock Exchange) since December 21, 2006.
